Project Design Phase-I
Solution Architecture

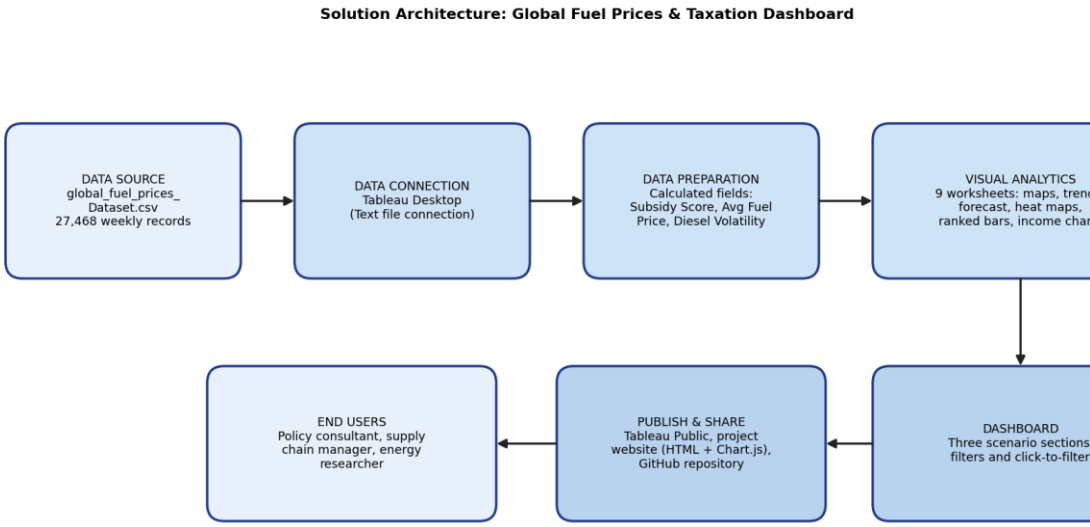

Date	19 September 2026
Team ID	[Add Team ID]
Project Name	Global Fuel Prices & Taxation Analysis Dashboard
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Sample Solution Architecture Diagram:

Component Description Table

Component Name	Description / Role in Architecture	Technology Used
Data Source	Weekly global fuel price dataset with prices, tax percentage, subsidy level, income level and region.	CSV file (27,468 rows, 10 columns)
Data Connection	Loads the CSV into the analysis tool.	Tableau Desktop (Text file connection)
Data Preparation	Sets data types and creates Subsidy Score, Avg Fuel Price and Diesel Volatility fields.	Tableau calculated fields
Visual Analytics	Nine worksheets covering maps, trends, forecast, heat maps, ranked bars and income-based charts.	Tableau Desktop
Dashboard	Combines the worksheets into three scenario sections with filters and click-to-filter actions.	Tableau dashboard and story
Publishing	Shares the dashboard online with a project website and source repository.	Tableau Public, HTML/CSS/JavaScript with Chart.js, GitHub
End Users	Policy consultant, supply chain manager and energy researcher who explore the dashboard.	Web browser
