By using stories in Tableau, you can effectively communicate complex data in a way that is both interactive and engaging, making it easier for the audience to follow along and understand the insights. It's a tool for **data storytelling**, allowing you to present insights in a cohesive, engaging way that takes viewers through a logical progression of findings or analyses.

In Tableau, **Story** is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

Observations:

- **Subsidies and prices:** Countries with Low subsidies average about $3.09 per litre against about $0.13 at the Very High level.
- **Tax concentrated in low-subsidy countries:** Low-subsidy countries tax fuel at about 37.5%, while Medium, High and Very High countries are all near 15%.
- **Income gap in prices:** High-income countries pay about $3.55 per litre for petrol, compared with about $1.39 in Low-income and $1.59 in Middle-income countries.
- **Diesel prices rising:** Average diesel rose from about $1.39 per litre in 2020 to about $2.47 in 2026.
- **Costliest and cheapest markets:** Hong Kong is the costliest diesel market at about $5.10 per litre; Venezuela, Iran and Libya are cheapest.
- **Volatility differs by region:** The Middle East has the highest diesel volatility and Oceania the lowest.
