SMARTBRIDGE
Let's Bridge the Gap

Project Initialization and Planning Phase

Date	15 March 2024
Team ID	[Add Team ID]
Project Title	Global Fuel Prices & Taxation Analysis Dashboard
Maximum Marks	3 Marks

Project Proposal (Proposed Solution) template

This project proposal outlines a solution to address a specific problem. With a clear objective, defined scope, and a concise problem statement, the proposed solution details the approach, key features, and resource requirements, including hardware, software, and personnel.

Project Overview	
Objective	Build an interactive Tableau dashboard that analyses global petrol, diesel and LPG prices, taxes and subsidies, and answers the questions of three stakeholders: a policy consultant, a supply chain manager and an energy economics researcher.
Scope	84 countries in 7 regions, weekly data from January 2020 to April 2026 (27,468 records, 10 fields). The project covers data preparation, 9 visualisations, one dashboard, a Tableau story, a project website and documentation. It does not include live data feeds or price prediction models beyond Tableau's forecast.
Problem Statement	
Description	Fuel taxes, subsidies and prices differ widely between countries, regions and income groups, and the data is too large to compare by hand. Decision makers cannot easily see where fuel is taxed most, whether subsidies lower prices, where prices are heading, or how income level matters.
Impact	Clear, visual answers help governments design fairer tax and subsidy policy, help logistics teams cut fuel cost and risk, and help researchers publish evidence on how income, tax and subsidies relate.
Proposed Solution	

Approach	Load the CSV into Tableau, create calculated fields (Subsidy Score, Avg Fuel Price, Diesel Volatility), build nine worksheets grouped by scenario, combine them into one dashboard with filters, add a Tableau story, and publish to Tableau Public with a project website and GitHub repository.
Key Features	Nine visualisations in three scenario sections; year and region filters with click-to-filter; diesel trend with forecast; top and bottom 10 markets; volatility heat map; income-level comparisons; and an interactive project website.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Standard laptop CPU, no GPU needed
Memory	RAM specifications	8 GB RAM
Storage	Disk space for data, models, and logs	Under 1 GB (the CSV is about 1.9 MB)
Software		
Frameworks	Python frameworks	Tableau Desktop and Tableau Public; Chart.js for the website
Libraries	Additional libraries	pandas (data checks and summaries), Chart.js
Development Environment	IDE, version control	Tableau Desktop, a text editor, Git and GitHub
Data		
Data	Source, size, format	Course-provided CSV (global_fuel_prices_Dataset.csv), 27,468 rows by 10 columns, weekly data
